# Correction to: How to squat? Effects of various stance widths, foot placement angles and level of experience on knee, hip and trunk motion and loading

Silvio Lorenzetti<sup>1,2\*</sup>, Mira Ostermann<sup>1,3</sup>, Fabian Zeidler<sup>1,4</sup>, Pia Zimmer<sup>1,4</sup>, Lina Jentsch<sup>1</sup>, Renate List<sup>1</sup>, William R. Taylor<sup>1</sup> and Florian Schellenberg<sup>1</sup>

**Correction to: BMC Sports Sci Med Rehabil (2018) 10:14**  
<https://doi.org/10.1186/s13102-018-0103-7>

Following publication of the original article [1], the authors reported an error in the following sentence on page 8: “In general, knee varus (negative  $\Delta D^*$ ) is a much more common deficit than valgus, and a more negative  $\Delta D^*$  value in the novice squatters compared to the experienced ones was therefore expected.”

The correct sentence reads as follows: “In general, knee varus (positive  $\Delta D^*$ ) is a much more common deficit than valgus, and a more positive  $\Delta D^*$  value in the novice squatters compared to the experienced ones was therefore expected.”

Thanks to Moshe Marko for noticing this error.
